

ATS2640 — Spaced-Repetition Flashcards (Deliverable C)

Importable to Anki/Quizlet. Format: **Front | Back | Tags** (pipe-separated, one per line). Front = prompt, Back = ≤2-sentence answer. Tags: level (L0–L6) and week (W1–W12) plus topic.

What is ethics (in this unit)? | Reasoned argument about what's right and wrong to do, backed by reasons – not just feelings or taste. | L0 foundations

Descriptive vs normative claim? | Descriptive = how things ARE ("most states have armies"); normative = how things OUGHT to be ("states shouldn't target civilians"). This unit is normative. | L0 foundations

What is a moral argument? | Premises (reasons) leading to a conclusion; you test it by asking if the premises are true and the conclusion follows. Your oral answers should be mini-arguments, not bare opinions. | L0 foundations

Why does the unit reject relativism? | If morality were "just opinion" you couldn't say a massacre was wrong – only that you dislike it. We can say it's genuinely wrong, so relativism is set aside. | L0 W1 foundations

THE MASTER KEY: what two theories drive nearly every debate? | Consequentialism (only outcomes matter) vs deontology/absolutism (some acts are wrong in themselves whatever the outcome). Almost every argument in the unit is a version of this clash. | L0 master-key

Define consequentialism. | An act is right if it produces the best overall outcomes (most good, least suffering); only results matter. E.g. "drop the bomb if it ends the war and saves more lives on balance." | L0 master-key

Define deontology (absolutism). | Some acts are right or wrong in themselves whatever the outcome; there are duties and rights you must not violate even to get good results. E.g. "never deliberately kill an innocent, even to win." | L0 master-key

One-sentence consequentialist vs deontologist clash? | A general can end a war by deliberately bombing a city of innocents: the consequentialist may say yes (fewer total deaths), the deontologist says no (murdering innocents is wrong in itself). | L0 master-key

Tool: intention vs foresight? | Intending a harm (it's your aim or your means) vs merely foreseeing it as a side-effect. Deontologists think this distinction matters enormously. | L0 power-tool

Tool: doing vs allowing? | Killing someone versus letting them die; often treated as morally different even when the outcome is the same. | L0 power-tool

Tool: rights and duties? | A right (e.g. not to be killed) creates a duty in others; a right can "trump" – outweigh – even very good outcomes. | L0 power-tool

Tool: moral status / respect? | Persons have a special dignity, and how you treat someone can fail to respect that dignity even if the outcome is "fine." This becomes Sparrow's robots argument in W11. | L0 power-tool W11

Why is intention-vs-foresight so important? | It's what lets a deontologist permit some foreseen civilian deaths (side-effects) while absolutely forbidding intended ones – the engine of double effect. | L0 power-tool W8

The core question of the whole unit? | Is war ever morally justified – and if so, what limits apply to how it's fought? | L1 foundations

Define combatant vs non-combatant. | Combatant = someone who fights or is part of the war-making machine; non-combatant/civilian = someone who isn't. This line is the single most important distinction in the unit. | L1 W6 vocabulary

Define aggression. | Using force against another state's sovereignty or territory – the standard wrong that starts an unjust war. | L1 W4 vocabulary

Define sovereignty. | A state's right to run its own affairs free from outside force. | L1 W4 W5 vocabulary

Name the three traditions on war. | Realism (morality doesn't apply to war), pacifism (war is never justified), and just war theory (sometimes, if strict criteria are met). | L2 W1 traditions

Realism in one line + its reason? | Morality doesn't really apply to war; states must pursue survival and interest in an anarchic world, and a state that fights morally while enemies don't will lose. | L2 W3 realism

Pacifism in one line + its reason? | War is never justified – either because killing is always wrong (absolutist) or the costs always outweigh the gains (consequentialist). | L2 W2 pacifism

Just war theory in one line? | War is sometimes justified, but only if strict conditions are met; it blends deontological limits (never target innocents) with consequentialist checks (proportionality). | L2 W1 jwt

Who are the realist thinkers? | Morgenthau ("twilight of international morality") and Bacevich – morality is irrelevant to international affairs; power and interest rule. | L2 W3 realism thinkers

Who is the unit's pacifist? | Tolstoy – patriotism is the root of war's evil; renounce violence entirely. | L2 W2 pacifism thinkers

Who rebuts BOTH realism and pacifism? | Orend – defends just war theory against the realist (morality does

apply) and the pacifist (war can sometimes be justified). | L2 W3 jwt thinkers

What does Anscombe say about pacifism? | She attacks it: pacifism perniciously blurs the line between killing combatants and murdering the innocent, making atrocity easier, not harder. She's a just-war Catholic, not a pacifist. | L2 W2 anscombe

JWT's two independent halves? | Jus ad bellum = justice of GOING to war (starting); jus in bello = justice IN fighting (conduct). They are judged separately. | L3 jwt structure

Why are ad bellum and in bello independent? | A war can be just to start but fought with atrocities, or unjust to start but fought cleanly. Confusing the two halves is a classic error. | L3 jwt structure

Example: just to start, fought unjustly? | A justified self-defence that then deliberately bombs enemy civilians – just cause, unjust conduct. | L3 jwt structure

Example: unjust to start, fought cleanly? | An aggressive invasion whose soldiers nonetheless target only enemy combatants and spare civilians. | L3 jwt structure

What is jus post bellum? | Justice AFTER war – the ethics of settlements, reconstruction and accountability. A minor third part of just war theory. | L3 jwt structure

List the jus ad bellum criteria. | Just cause, legitimate authority, right intention, proportionality, last resort, and reasonable prospect of success. | L4 ad-bellum

Ad bellum: just cause? | A genuine wrong to respond to, usually self-defence against aggression. | L4 ad-bellum

Ad bellum: legitimate authority? | The war must be declared by a proper public authority, not a private group. | L4 ad-bellum

Ad bellum: right intention? | Actually aiming at the just cause, not using it as a cover for something else (e.g. seizing resources). | L4 ad-bellum

Ad bellum: proportionality? | The war's expected overall good must outweigh its expected overall harm. | L4 ad-bellum

Ad bellum: last resort? | Peaceful alternatives must be tried or genuinely exhausted before resorting to force. | L4 ad-bellum

Ad bellum: reasonable prospect of success? | Don't wage a hopeless war – pointless slaughter with no chance of achieving the just cause is unjustified. | L4 ad-bellum

List the jus in bello criteria. | Distinction, proportionality, no mala in se (no intrinsically evil means), and necessity. | L4 in-bello

In bello: distinction? | Only target combatants; never deliberately target non-combatants. This civilian-immunity rule is the big one. | L4 W6 in-bello distinction

In bello: proportionality? | A strike's military gain must outweigh its collateral (unintended) civilian harm. | L4 in-bello

In bello: no mala in se? | Don't use means "evil in themselves" – e.g. torture, rape, poison – even in a just war. | L4 W8 in-bello

In bello: necessity? | Use no more force than the military goal actually requires. | L4 in-bello

Common trap: which proportionality is which? | Ad bellum proportionality weighs the WHOLE war's good vs harm; in bello proportionality weighs a SINGLE strike's gain vs its civilian harm. | L4 jwt structure

Quick test for any in-bello question? | Ask: is the principle in play distinction, proportionality, or mala in se – and is the harm intended or merely foreseen? | L4 in-bello exam-technique

What is the Doctrine of Double Effect (DDE)? | It can be permissible to cause civilian deaths you FORESEE but don't INTEND, if they're a side-effect of a legitimate strike and proportionate. Intending civilian deaths as aim or means is always forbidden. | L5 W8 dde

Who is associated with DDE? | Anscombe ("War and Murder") and Nagel ("War and Massacre") – it's how just war theory permits some collateral damage without abandoning civilian immunity. | L5 W8 dde thinkers

DDE: the key test? | Are the civilian deaths your aim or your means (forbidden), or a foreseen side-effect of hitting a legitimate target (permissible if proportionate)? | L5 W8 dde

Standard objection to DDE? | Critics say "I foresaw it but didn't intend it" can be a self-serving redescription, and consequentialists say a death is just as bad however it was caused. | L5 W8 dde objection

What is the moral equality of combatants? | Walzer's view: every soldier may kill enemy soldiers regardless of whose cause is just – soldiers are moral equals once fighting. | L5 W6 walzer

Who challenges the moral equality of combatants? | Revisionists McMahan and Rodin: a soldier fighting an UNJUST cause is like an armed robber, so only the just side's soldiers are really permitted to kill. | L5 W6 mcmahan rodin

What is liability (McMahan)? | What makes you a legitimate target isn't your uniform but your moral responsibility for an unjust threat. This reshapes who may be killed and feeds the drone and robot debates. | L5 W6 mcmahan liability

What is mala in se? | Means or acts that are "evil in themselves" – wrong intrinsically, not just because of their effects (e.g. torture, rape, poison, arguably nuclear weapons). | L5 W8 mala-in-se

Who can call something mala in se – and who can't? | A deontologist can, because they accept acts wrong in themselves; a pure consequentialist struggles, since for them only outcomes determine right and wrong. | L5 W8 mala-in-se master-key

Why are non-combatants immune – the three candidate reasons? | Because they're innocent, or harmless, or not responsible for the threat. Which ground you pick is the Primoratz-vs-Sparrow debate. | L5 W6 immunity

What is Rodin's "reductivist" challenge? | National self-defence can't be cleanly grounded the way individual self-defence is, so the standard just-war justification for going to war is shakier than it looks. | L4 W4 rodin

What does Hurka contribute? | An analysis of proportionality – which goods count in the moral weighing, and against what harms. | L4 W4 hurka proportionality

Walzer's "legalist paradigm"? | War is aggression against a state's political sovereignty or territorial integrity, and self-defence against that aggression is what justifies going to war. | L4 W4 walzer ad-bellum

W4 likely question: is national self-defence like individual self-defence? | Walzer treats them as analogous; Rodin says no – a state isn't a person, so the analogy can't fully ground the right to wage war. | L4 W4 rodin debate

What is humanitarian war (W5)? | Going to war to protect foreigners from their own state – pitting human rights against state sovereignty. | W5 humanitarian

Annan's contribution to W5? | "Sovereignty as responsibility" and R2P (Responsibility to Protect): sovereignty is conditional on a state protecting its people, and lapses if it slaughters them. | W5 annan r2p

Krasner on sovereignty? | Sovereignty is "organised hypocrisy" – a norm constantly invoked yet routinely violated when powerful states find it convenient. | W5 krasner

Coady's role in W5? | He critiques humanitarian war – sceptical that intervention's good intentions reliably produce good outcomes or escape abuse. | W5 coady objection

W5 real case? | NATO's 2011 intervention in Libya, with Kuperman's reassessment that it may have worsened outcomes rather than saving lives. | W5 libya case

W5 likely question? | Does "Responsibility to Protect" override sovereignty? Annan says a brutal state forfeits its shield; Coady warns intervention often backfires. | W5 r2p debate

W6 focus: the principle of distinction? | Only combatants may be deliberately targeted; non-combatants are immune. The week asks WHY they're immune. | W6 distinction

Primoratz on civilian immunity? | A responsibility-based account: civilians are immune because they aren't responsible for the war's threats in the way combatants are. | W6 primoratz immunity

Sparrow's "Hands up who wants to die?" | His W6 reply to Primoratz on civilian immunity and responsibility – pressing how responsibility actually grounds (or fails to ground) who may be killed. | W6 sparrow examiner

W6 likely question? | What makes a person a legitimate target – being a threat, being responsible, or wearing a uniform? Walzer says the role; McMahan says moral responsibility. | W6 distinction debate

W6 real-world cases? | IHL/ICRC rules, civilian-targeting in Syria, and the Brereton report into alleged Australian war crimes in Afghanistan. | W6 cases brereton

Define terrorism (Primoratz). | Deliberate violence against innocents (non-combatants) to terrorise and coerce a wider group; condemned because it violates non-combatant immunity. | W7 primoratz terrorism

Held on terrorism? | Terrorism should be judged by the SAME standards as war, and may sometimes be no worse than so-called "legitimate" war. | W7 held terrorism

Can states be terrorists? | Yes – "state terrorism" (e.g. death-squad readings) shows terrorism isn't only what non-state actors do; states can deliberately terrorise innocents too. | W7 state-terrorism

W7 likely question? | Define terrorism; is it always worse than conventional war? Primoratz condemns targeting innocents, Held says the same standard applies to both. | W7 terrorism debate

Why is terrorism wrong on the standard account? | Because it deliberately targets the innocent/non-combatants to coerce – a direct breach of the distinction principle. | W7 terrorism distinction

W8 core clash (Nagel)? | "War and Massacre": absolutism (some things, like targeting the innocent, you must never do) versus utilitarianism (do whatever yields the best outcome). | W8 nagel master-key

What makes a weapon mala in se rather than just very destructive? | Not its scale of harm but that using it inherently violates distinction or dignity (e.g. poison gas), so it's wrong in itself, not just by its effects. | W8 mala-in-se

Dinstein and Forge in W8? | Dinstein on which weapons are legally prohibited; Forge on the morality of weapons research – whether designing certain weapons is itself wrong. | W8 thinkers

W8 reflective probe? | Could you ever use nerve gas or landmines and still respect distinction? The intuition that you can't suggests some weapons are mala in se. | W8 mala-in-se probe

Why is nuclear weapons (W9) philosophically central? | A strategic nuke stress-tests every in-bello principle at once – distinction (indiscriminate), proportionality (uncontainable effects), and mala in se – plus the unique deterrence paradox. | W9 nuclear

Are nuclear weapons mala in se? (the argument) | You can't realistically use a strategic nuke without massive civilian death, so it can't satisfy distinction or proportionality – arguably making it intrinsically unusable within just war theory. | W9 nuclear mala-in-se

What is the deterrence paradox? | Can it be ethical to THREATEN to do something (incinerate cities) that it would be unethical to actually DO? Deterrence needs a sincere threat to commit what may be mass murder. | W9 nuclear deterrence

Why is the deterrence paradox a pure L0 puzzle? | It turns entirely on intention vs act: even if launching is

murder, is merely intending/threatening it also wrong? That's the consequentialist-vs-deontologist question in miniature. | W9 nuclear master-key

Glover (Humanity) on nuclear war? | A moral history treating Hiroshima/Nagasaki as a turning point where moral restraints eroded. | W9 glover

Ward Wilson, "The Gordian Knot"? | He doubts the standard story: nuclear weapons may not even work as deterrents, and the Soviet invasion (not Hiroshima) may have caused Japan's surrender – weakening the consequentialist case for them. | W9 wilson deterrence

Schlosser on nuclear weapons? | "World War Three by Mistake" – stresses the ever-present risk of catastrophic accident, adding an outcome-based reason against keeping them. | W9 schlosser accident

W9 reflective probe (radiation vs shrapnel)? | "Is it worse to die of radiation poisoning than of shrapnel?" It tests whether nuclear death is specially wrong or whether we're just overwhelmed by scale. | W9 nuclear probe

W9 likely question? | Are nuclear weapons mala in se, and can the THREAT be moral even if USING them wouldn't be? Bring in Ward Wilson on whether deterrence even works. | W9 nuclear debate

Define targeted killing (W10). | The intentional, premeditated killing of a specific named individual by a state, typically OUTSIDE a formally declared armed conflict, increasingly by drone. | W10 targeted-killing

Why does "outside armed conflict" matter? | It blurs war (where killing combatants is allowed) with law enforcement (where you must arrest, not execute), so it's unclear which rules apply. | W10 targeted-killing

War or execution – the central W10 debate? | Is the target a combatant (killable) or a criminal (must be arrested)? If they're a criminal, killing them is extrajudicial execution, not warfare. | W10 targeted-killing debate

What is a signature strike? | Killing people based on a pattern of behaviour rather than confirmed identity – the most ethically fraught form, since you may kill people you can't even name. | W10 signature-strike

Byman, "Why Drones Work"? | The PRO case: drones are precise and reduce risk to your own troops AND to civilians compared with the alternatives like invasions or bombing. | W10 byman pro-drones

Boyle on drones? | The ANTI case: strategic blowback – civilian deaths radicalise populations and breed more enemies, making drone campaigns counter-productive. | W10 boyle anti-drones

Coll, "The Unblinking Stare"? | A close account of the reality of the drone war in Pakistan – the on-the-ground texture behind the policy debate. | W10 coll

What is the asymmetry / riskless-killing worry? | The drone operator faces zero danger, raising the question of whether risk-free killing is troubling in itself. Sparrow is sceptical of riskless, asymmetric war. | W10 asymmetry sparrow

W10 body-armour reflective probe? | Should SAS soldiers remove body armour to make the fight "fair"? It probes whether risk-free killing is wrong, or whether force-protection is simply good. | W10 asymmetry probe

W10 café cruise-missile case? | Fire a missile at terror plotters in a London café, killing 12 innocent bystanders, or let them escape? Reason it aloud via proportionality and double effect, not a flat yes/no. | W10 cafe-case dde

W10 real case (precautions in attack)? | The August 2021 Kabul drone strike that killed 10 civilians including children – a failure of the precaution-and-distinction requirement. | W10 kabul case

W10 likely question? | Is targeted killing more like warfare or extrajudicial execution, and do signature strikes and asymmetry raise distinct moral problems? | W10 targeted-killing debate

Define autonomous weapon systems (AWS). | Weapons that select and engage targets without meaningful human control – "killer robots." Different from drones, which still have a human pulling the trigger. | W11 aws

Sparrow's responsibility-gap argument? | In-bello requires that SOMEONE can be justly held responsible for a wrongful killing, but with a truly autonomous machine no one qualifies – not programmer, commander, or machine – so using AWS to kill is illegitimate. | W11 sparrow responsibility-gap

Why isn't the programmer responsible (responsibility gap)? | Because they couldn't predict the machine's specific lethal decision, so it's unfair to blame them for it. | W11 sparrow responsibility-gap

Why isn't the commander responsible (responsibility gap)? | Because a genuinely autonomous machine made the targeting decision, not the commander, so the commander didn't choose that killing. | W11 sparrow responsibility-gap

Why isn't the machine responsible (responsibility gap)? | Because you can't meaningfully blame or punish a machine – it has no moral standing to answer for a death. | W11 sparrow responsibility-gap

Sparrow's "Robots and Respect" argument? | Being killed by a machine that "decides" your death fails to respect your moral status, because no human agent acknowledges the gravity of taking your life. | W11 sparrow robots-respect

Are Sparrow's two arguments the same? | No – keep them distinct: the responsibility gap is about accountability (no one answers for the killing); robots & respect is about dignity (no human honours your moral status). | W11 sparrow

W11 reflective probe (your brother)? | Would it matter if your brother were killed by an autonomous machine rather than a human-piloted drone? Most feel it would, and Sparrow says that intuition tracks a real moral wrong (the respect argument). | W11 sparrow probe

Arkin, "The Case for Ethical Autonomy"? | The PRO case: robots could be MORE ethical than humans – no fear,

rage, revenge or self-preservation – and an "ethical governor" could obey the laws of war more reliably than stressed soldiers. | W11 arkin pro-aws

What is Arkin's "ethical governor"? | A built-in control that enforces the laws of war on the machine, potentially preventing atrocities like My Lai that frightened, angry soldiers commit. | W11 arkin

Arkin's strongest punch? | If AWS would kill FEWER civilians than human soldiers, then refusing to build them is the immoral choice. | W11 arkin pro-aws

How does Sparrow answer Arkin? | Good outcomes don't fill the accountability gap or restore dignity: even if robots killed fewer civilians, no one would answer for wrongful deaths and the killed still aren't respected as persons. | W11 sparrow arkin reply

Why is the Sparrow-Arkin debate really an L0 fight? | It's consequentialism (Arkin: better outcomes justify AWS) vs deontology (Sparrow: accountability and respect matter regardless of outcomes) – wearing a robot costume. | W11 master-key sparrow arkin

Can a machine satisfy distinction and proportionality? | Distinction needs more than object-recognition and proportionality needs JUDGEMENT – weighing military advantage against civilian harm – which sceptics doubt code can do. | W11 aws distinction proportionality

What is "meaningful human control"? | The policy demand (Campaign to Stop Killer Robots; the Slaughterbots video) to keep a human "in or on the loop" so a person remains responsible for each kill. | W11 aws policy

AWS and lowering the threshold of war? | If your own soldiers face no risk, war becomes too easy to start – linking AWS back to W10 asymmetry and to jus ad bellum. | W11 aws ad-bellum asymmetry

W11 likely question? | Explain the responsibility-gap argument and say whether it's convincing; then say how Sparrow answers Arkin's claim that robots could be more humane. | W11 sparrow debate

Synthesis: nuclear deterrence x intention/foresight (L0)? | The deterrence paradox is just the L0 intention-vs-act puzzle scaled up – is intending/threatening mass murder as wrong as doing it? | SYNTH W9 master-key

Synthesis: drones x liability (W6 McMahan)? | McMahan's liability ("targetability tracks responsibility for an unjust threat, not uniform") is exactly what signature strikes get wrong – killing by behaviour pattern without establishing responsibility. | SYNTH W10 W6 liability

Synthesis: AWS x distinction (W6)? | The W6 distinction principle becomes the hardest test for W11 robots – can a machine reliably tell combatant from civilian and never deliberately target the innocent? | SYNTH W11 W6 distinction

Synthesis: nuclear x mala in se (W8)? | W8's mala-in-se idea is what lets you argue nuclear weapons are intrinsically wrong, not merely very destructive, because they can't be used without massacring innocents. | SYNTH W9 W8 mala-in-se

Synthesis: terrorism x distinction (W6/W7)? | Primoratz condemns terrorism precisely because it breaks the W6 distinction rule – deliberately killing innocents – which is also why some argue states bombing cities commit "state terrorism." | SYNTH W7 W6 distinction

Synthesis: humanitarian war x just cause (W4/W5)? | R2P stretches "just cause" beyond self-defence to protecting foreigners, forcing the W4 question of whether protecting human rights can legitimately justify going to war. | SYNTH W5 W4 ad-bellum

Synthesis: asymmetry x jus ad bellum (W10/W11)? | Riskless drone and robot war makes starting wars cheaper for the attacker, threatening the ad-bellum requirement of last resort and proportionality. | SYNTH W10 W11 ad-bellum

Synthesis: realism x nuclear deterrence? | A realist might defend deterrence purely on state-survival grounds; the deontologist replies that survival can't license a standing threat to murder millions. | SYNTH W3 W9 master-key

Synthesis: DDE x the café/Kabul cases? | Both targeted-killing cases turn on DDE – are the civilian deaths a proportionate foreseen side-effect, or effectively intended because reckless about identity? | SYNTH W10 W8 dde

Synthesis: moral equality of combatants x drones? | If McMahan is right that only just-side soldiers may kill, a drone operator on an unjust war is like an armed robber – liability, not uniform, decides. | SYNTH W6 W10 mcmahan

Synthesis: pacifism x autonomous weapons? | A pacifist rejects all war, but Anscombe-style critics warn that AWS could erode the combatant/innocent line further – the very blurring she says pacifism wrongly encourages. | SYNTH W2 W11 anscombe

Synthesis: realism x humanitarian war? | The realist says states intervene only when it suits their interest (Krasner's "organised hypocrisy"); the R2P defender insists there's a genuine duty to protect. | SYNTH W3 W5 realism

Exam house format – the 5 beats? | POSITION (one-sentence stance), REASON (main argument), OBJECTION (strongest counter), REPLY (why your view still stands), EXAMPLE (one real case). | exam-technique

Golden rule for oral answers? | Define, give one argument, give the strongest objection, then your view plus an example. Even a shaky answer scores well if it shows that structure and reasons aloud. | exam-technique

What does the marking rubric reward? | Knowledge of unit content, clarity of explanation, taking an intellectual position, and supporting it with reasoned argument. Three of the four are about FORM – always land a clear opinion and a reason. | exam-technique

Fallback move when stuck? | Ask out loud: is this a jus ad bellum or jus in bello question, and which principle is in play – distinction, proportionality, or mala in se? | exam-technique

Most common beginner error to avoid? | Confusing jus ad bellum (going to war) with jus in bello (fighting it) – they're independent and judged separately. | exam-technique jwt

The six authentic question styles? | Define and distinguish; apply a principle to a case; argue both sides; probe a moral intuition; connect to a real event; foundational/meta (e.g. is relativism tenable?). | exam-technique

One-line summary of the whole unit? | Two theories (consequentialism vs deontology) aimed at one question (is war ever OK?), answered three ways (JWT wins), split into starting vs fighting, each with criteria, refined by power tools, all colliding in nuclear, drones and robots. | exam-technique master-key

Key real cases to have ready? | US/Israel strike on Iran (2026), Ukraine/Bucha, Hiroshima, My Lai, Libya, the Kabul drone strike, and the Brereton report. | exam-technique cases

Who is the examiner and what's his field? | Robert Sparrow – W11 autonomous weapons is his own research (responsibility gap + robots & respect), and he also defends robust civilian immunity in W6. | exam-technique sparrow

If asked your own view, what must you do? | State a clear opinion in one sentence AND give at least one reason for it – never sit on the fence; a crisp stance with one good reason beats a balanced ramble. | exam-technique
